Hi Robert, I spoke to my board last evening and as I suspected, no problem using information on our website. They do assume that "Bucks County chapter of Trout Unlimited would be credited for any posted data or photos. Frank

Frank, many thanks,
I will keep in contact when I think Lake progress is moving to a point a drone video would be nice to have. no pressure!

the project is moving fast, which I am sure is good news to TU. I was there this morning to see the 2d of 3 pumps set in site. Also notice a very large carpe, which of course will disappear in due time to be, I hope, replaced byTrout?

Cheers,
Robert

Robert, You absolutely have my permission to use any previously or future video taken of the site. We'll make every effort to continue but will all be away for a lot of the summer. It's very exciting to have gotten to this point in the project. Many years of late night meetings as well as boots on the ground have prevailed. I'll ask my fellow TU board members about your request but I'm sure that asking is just a formality. Regards, Frank

Dear Jade and Frank,
I wanted to reach out to say thank you for sharing the Drone Video's with STHS as well as to outline our project around the removal of the Aquetong Lake dam.

Briefly the Historical Society has a project to follow the change in the lake and area in the coming 3 years. Photos, documents about Who, What, Where, Why & How and items of the areas' history will be posted to research pages on STHS' web site. Years ago we would have opened a paper file and dumped stuff into it, never to be seen again. Now we want data up and current so people can see what is happening and in future days see what the Lake was all about.

Your Drone videos are perfect for showing the Lake. WE will start the web research site within the next two weeks.

What we would like from you if at all possible:

1. If you can give us permission by return email to post your work, the video's, it would be nice to have.
2. For Trout Unlimited we have several items from you which I believe are on your web site, like the 2004 presentation on why the dam should be removed, and we will be posting these, giving TO full credit. Please let us know if you have any objections.
3. We hope in future months you can again shoot some videos to show, for example:
 - *the (de)construction equipment in place and working.
 - *the small screen dam that will be built below the dam to catch sediment.
 - * the lake as it retreats and the stream as it finds its' course.
 - * late summer, or next year, other videos of the mud area and eventually the new growth.

To help this along, I will share with you the schedule of when events happen, and since the park property is now closed for use, If you do want to continue to help us, I will work with the Township Manager to get permission for you to do the fly overs from the grassy park area.

I have copied our still photographer, Don Schoenleber, who you may already know as he is a member of TO. He has been out in all the poor winter weather weather getting great shots for the project.

many thanks again for your help and response to these ideas.

Robert McEwan
Board member
STHS

Robert,
The two people you may want to contact to learn more about the drone videos and how they were edited are Frank Nassetta (TU Director and former AWA Director) and Jade Greene (AWA Director). I copied them on this so they would know where the connection came from.
The YouTube videos are great.
Les

Hi all,
Just to let you know the two videos shot a few weeks ago are on the web. we are working to put the STHS web site chapter on the lake up soon, but as you are all working on this project I thought you may find them interesting or helpful.

Les, thank you for sharing them and getting them edited. I would like to talk to the people directly if at all possible. do you have an email for one or more of them you could send me?

Cheers,
Robert
